ESG RATINGS

FY2026

BASF India Limited

BASF India Limited

Last Review Date: 15th October 2026

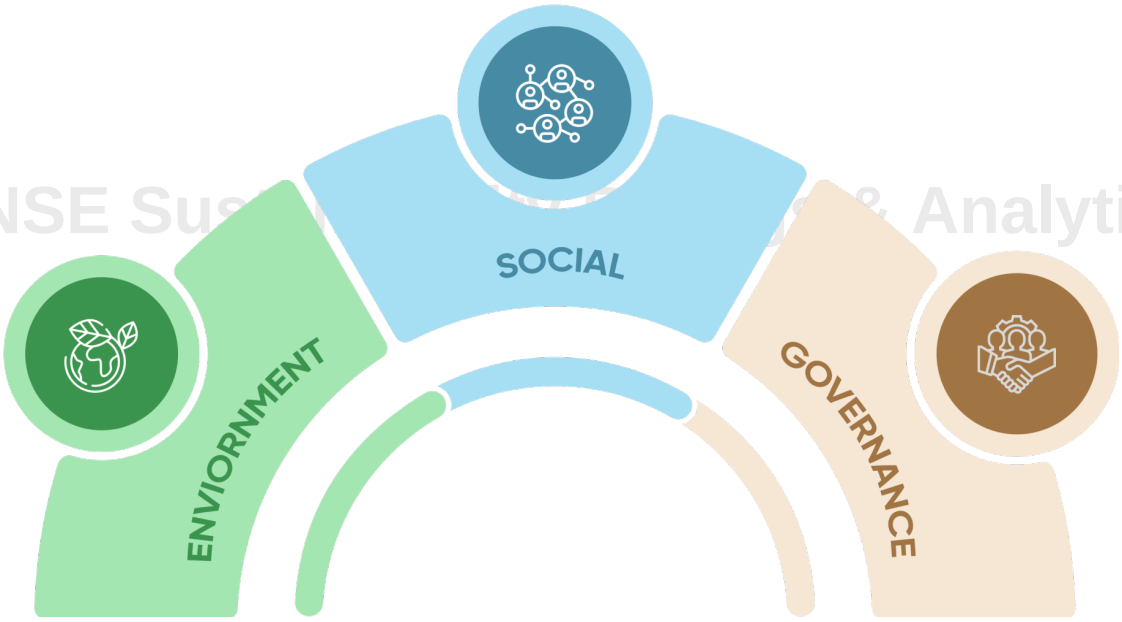

Environment Score	Social Score	Goverance Score
72	76	73

FY2026 ESG Rating	FY2025 * ESG Rating
74	72

Rating Category : Leader

BASF India Limited is a chemical company headquartered in Mumbai, India. It falls under the Commodities macro-economic sector. BASF India offers a wide range of chemical products and solutions for various industries, including agriculture, automotive, and construction. They are a subsidiary of BASF SE, a global chemical company.

We have assessed the company across the three pillars – Environment, Social and Governance:

ESG Ratings assess how a company manages its material ESG issues, such as climate change, employee and community welfare, diversity, anti-corruption, etc. and how it creates positive outcomes for its stakeholders and society at large. It also evaluates how the company manages and mitigates ESG-related risks through various initiatives and commitments, as well as how it identifies ESG-related opportunities.

We define sector-wise ESG parameters and evaluate a company's performance against those parameters, assigning a rating using a structured scoring framework:

• **Environmental assessment** Environmental Stewardship assesses the company's impact on the natural environment and its efforts towards sustainability. It includes aspects like climate change mitigation, sustainable management of resources and so on.

© Copyright 2026 - NSE Sustainability Ratings and Analytics Ltd. All Rights Reserved

• **Social impact** helps assess how well leadership manages relationships with stakeholders, ensures employee welfare, positively impacts communities, and holds supply chain partners accountable. Businesses are evaluated based on their policies and initiatives around diversity, inclusion, social equity, and ethical conduct.

• **Effective governance** including transparency and disclosures is crucial for ensuring business continuity and minimizing risk. We assess factors such as the independence and diversity of the board, segregation of the roles of CEO and Chairperson, and the composition of auditors, including the balance between audit and non-audit/advisory services.

Core ESG Rating

Core ESG Rating provides a focused and credible evaluation of a company's fundamental ESG performance, grounded in third-party assured or audited data, specifically derived from BRSR Core disclosures. This rating emphasizes transparency and reliability by utilizing a curated subset of key ESG indicators that are considered critical for assessing a company's sustainability profile. These indicators are selected based on their relevance to long-term value creation, regulatory alignment, and stakeholder expectations. The Core ESG Rating serves as a robust benchmark for investors, regulators, and other stakeholders seeking to understand a company's genuine ESG practices, free from subjective interpretations or unaudited claims. By concentrating on verified data, it ensures consistency, comparability, and accountability across ESG assessments. For FY2026, the company has achieved a core Rating of 62, Comprising an environment score of 79, a Social Score of 63, and a Governance Score of 39

ESG Rating Framework employed by NSE Sustainability Ratings and Analytics Ltd

Data Source and Extraction

Data has been gathered from a variety of reliable sources, ensuring a well-rounded perspective on a company's practices. A multifaceted approach has been deployed, incorporating both quantitative and qualitative information to generate a comprehensive assessment of the company's ESG performance. NSE Sustainability derives data from trusted public sources including but not limited to Annual Reports, ESG Reports, BRSR (Business Responsibility & Sustainability Reports) report, Company Website, News, Stock Exchange Filings.

Assigning Weights to Theme Based on Materiality

The materiality assessment identifies the most significant ESG themes for the company within its specific industry context. By assigning higher weights to these material themes, we ensure that the aspects with the greatest impact on the company's sustainability and long-term value receive the most emphasis in the final ESG rating.

Weighting Methodology:

The findings from the materiality assessment are often presented in a Materiality Matrix. This matrix visually depicts the relative importance of ESG themes based on their environmental, social, and economic impact on the company and its stakeholders. Themes identified as having high financial impact and high stakeholder importance receive the highest weightings. Weights are assigned by thoroughly evaluating industry-specific ESG challenges and opportunities. This process ensures that the weighting is accurately refined based on the particular sector's context.

NSE Sustainability Ratings & Analytics

The availability and quality of data for each theme is also considered during the weighting process. Themes with robust and reliable data points receive a higher weighting to ensure the final ESG rating reflects a more accurate picture of the company's performance

Categorization of assessment parameters

The assessment parameters are categorised into five criteria designed to understand a company's ESG performance. These criteria are;

1. **Performance :**This assesses the company's actual resuls on a specific ESG metric based on the data points provided.
2. **Compliance :**This evaluates the company's adherence to relevant regulations and industry had practices related to the specfic ESG theme.
3. **Policy :**This assesses the strength and comprehensiveness of the company's policies addressing the specific ESG theme
4. **Initiatives :**This assesses address the ESG theme and achieve its stated goals. specific initiatives the company is undertaking to address the ESG theme and achieve its stated goals.
5. **Best Practise :**By incorporating these categories, a comprehensive and detailed evaluation of a company's ESG performance is provided. Each criterion offers a unique perspective, collectively ensuring a balanced and thorough assessment

© Copyright 2026 - NSE Sustainability Ratings and Analytics Ltd. All Rights Reserved

Rating Scale

The ESG rating methodology utilizes a clear and transparent rating scale to communicate a company's performance across the Environment, Social, and Governance (ESG) pillars. The ESG rating scale ranges such as to represent the degree of performance on a particular ESG theme. This scale is applied to each assessment parameter within the Environment, Social, and Governance pillars. However, crucially, the benchmarks for achieving a specific score vary depending on the industry a company operates in.

This industry-specific approach acknowledges that different industries have inherent differences in their environmental and social impact. For example, the expectations for greenhouse gas emission reduction will be significantly higher for an energy company compared to a software development company.

Further, companies are also scored on Environment and Social assessment parameters based on threshold / benchmark which are sector-agnostic making the scores comparable across industries.

Quantitative Data and Peer Benchmarks: When dealing with quantitative data points, such as energy consumption or waste generation, we benchmark a company's performance partly against peers within the basic industry and partly across sectors. If a company performs significantly better than its peers on a specific metric, it will achieve a higher score on the scale for that assessment parameter. Conversely, a company lagging behind the industry peers will receive a lower score

Qualitative Data and Transparency of Disclosures: For qualitative data points, the richness and detail of the company's disclosures play a crucial role in determining the score. It factors initiatives and goals undertaken by the company and their impact. A company that provides a comprehensive and transparent explanation of its policies, initiatives, and their resultant impact will be rewarded with a higher score. On the other hand, companies with vague or limited disclosures will receive a lower score.

The process initiates with the identification of relevance of each question. This precise approach ensures that each question's significance is accurately captured and contributes to the overall theme score. By meticulously mapping them and their corresponding weightages, a coherent system is created where the aggregation of theme scores reflects the true importance of each aspect assessed.

Rather than assigning weightages at the pillar level, we allow the weightages determined during the materiality mapping phase to flow seamlessly into the broader themes. This method ensures that the granular details of each theme's impact are preserved in the overall scoring process at the industry level.

The theme scores are consolidated into a comprehensive ESG rating. This is achieved by combining the scores of individual themes, which have been carefully assessed and scored based on the company's disclosures and performance against industry benchmarks. Each theme score is integrated to form a holistic view of the company's ESG performance

ESG landscape is evolving in terms of regulation, measurement standards, boundaries, disclosure level quantity/quality and standardization of parameters disclosed etc. Creating benchmarks or ideal scores using today's data may not be the best option. As these factors change in the next few years, the scores will undergo change across the board, most likely upwards, without necessarily improvement in the underlying core issues (but due to improvement in awareness/disclosures etc). To provide for that the current ESG rating is deflated by a factor that helps ESG ratings to be a fair representation of the systemic change in the ESG space and comparable over the years.

The ESG rating is normalized on a scale of 0 to 100. The ESG rating allows for cross-company and cross- industry comparisons of ESG performance.

© Copyright 2026 - NSE Sustainability Ratings and Analytics Ltd. All Rights Reserved

NSE Sustainability ESG Rating Category Classification Table:

Percentile Band	Rating Category	Descriptor
Top 10%	Leader	Demonstrates exceptional ESG maturity with best-in-class practices.
Next 25%	Aspiring	Shows strong ESG commitment with steady progress and solid disclosures.
Next 35%	Adequate	Maintains adequate ESG credentials with modest but positive efforts.
Next 25%	Moderate	Displays basic ESG practices with limited strategic depth.
Bottom 5%	Lagging	Lacks ESG focus and shows weak performance with minimal progress.

The ESG rating is adjusted based on the number, severity and frequency of negative events or allegations related to its ESG practices. The controversy score is used to discount the ESG rating of the company, according to a predefined framework. The higher the controversy score, the greater the discount applied to the raw ESG rating.

The Transition Score captures the sustainability outlook- ESG Rating embeds Transition Score of the companies thus ensuring they are rewarded not only for current ESG performance but also for their transition efforts.
