KILBURN ENGINEERING LIMITED

PRESS RELEASE

Kilburn Engineering Approves ₹25 Crore Investment to Significantly Expand Precision Engineering Capacity for Data Centre and Power Infrastructure

Expansion builds on long-standing customer relationships, including with Vertiv, and positions the business for growing requirements in India and international markets

Precision engineering business expects ₹50–60 crore revenue in FY2026–27; expanded operations estimated to support approximately ₹150 crore in annual revenue potential at scale

Kolkata | 30 October 2026

Kilburn Engineering Limited today announced that its Board of Directors has approved a strategic capital investment of up to ₹25 crore to expand the precision engineering and manufacturing capabilities of its subsidiary, Monga Strayfield Private Limited, at its Pune facility.

The proposed investment is aimed at substantially enhancing the business's precision engineering and manufacturing capabilities for enclosures, cabinets and assemblies serving data centre infrastructure, transformers and critical power applications. The capacity expansion is planned to be implemented progressively over the next six to nine months, with commissioning and utilisation aligned to operational readiness and customer requirements.

The Group's precision engineering business is currently expected to generate revenue of approximately ₹50–60 crore during FY2026–27. Based on the envisaged product mix, utilisation levels and a combination of in-house manufacturing and selective outsourcing, the expanded operations are estimated to have the potential to support annual revenue of approximately ₹150 crore at scale. The pace of revenue growth will be aligned with customer requirements and the progressive ramp-up of manufacturing operations.

Building on Long-Standing Customer Relationships

Monga Strayfield has an established, long-standing business relationship with Vertiv Energy Private Limited, part of Vertiv, a global leader in critical digital infrastructure. This relationship predates Kilburn Engineering's acquisition of Monga Strayfield.

The proposed capacity expansion is intended to strengthen Monga Strayfield's ability to serve the growing requirements of Vertiv and its other customers in India, and to position the business to pursue opportunities in international markets for precision-engineered enclosures, cabinets and assemblies.

The planned capacity has been sized with reference to the anticipated requirements of Monga Strayfield's established customer base. The investment is intended to strengthen the company's manufacturing capabilities and support growing demand for precision-engineered enclosures, cabinets and assemblies across data centre infrastructure, transformers and critical power applications.

Building a Broader Precision Engineering Platform

Beyond the current investment, Kilburn Engineering intends to leverage the combined engineering expertise and manufacturing infrastructure of Monga Strayfield, M.E. Energy and Kilburn Engineering across Ambernath, Kalyan and Pune. The Group will progressively evaluate additional product categories and solutions in data centre infrastructure, critical power, transformer equipment and thermal management, with further investments considered in line with customer requirements and commercial opportunities.

Management Commentary

Mr. Amritanshu Khaitan, Chairman, Kilburn Engineering Limited, commented:

"Our investment in Monga Strayfield reflects our confidence in the opportunities emerging across data centre infrastructure, critical power systems and the transformer industry. Monga Strayfield's long-standing relationship with Vertiv and its other established customers provides a strong foundation for this expansion, which positions the business to serve growing requirements in India and to pursue opportunities in international markets.

We see this investment as an important step towards building a larger precision engineering platform for the Kilburn Group. By leveraging the manufacturing facilities and engineering capabilities across our Group companies, we intend to progressively expand our product portfolio and address additional opportunities in these high-growth sectors, while scaling the business in a disciplined and capital-efficient manner."

About Kilburn Engineering Limited

Kilburn Engineering Limited is a diversified engineering group with capabilities in industrial drying, heating, thermal processing, waste heat recovery and precision-engineered manufacturing solutions. Through its subsidiaries, including Monga Strayfield and M.E. Energy, the Group serves customers across process engineering, energy efficiency, power infrastructure and industrial manufacturing sectors.
